Preliminaries

Preliminaries

Word

A word s is a finite sequence $s = s_1 s_2 \dots s_m$ of length $|s| = m$ on a finite alphabet Σ.

$$s = \boxed{\mathtt{a}}\boxed{\mathtt{b}}\boxed{\mathtt{b}}\boxed{\mathtt{c}}\boxed{\mathtt{a}}\boxed{\mathtt{b}}\boxed{\mathtt{c}}\boxed{\mathtt{d}}\boxed{\mathtt{a}}\boxed{\mathtt{b}}\boxed{\mathtt{c}}$$

Factor

A word $x \in \Sigma^*$ is a factor of s if and only if s can be written $s = uxv$ with $u, v \in \Sigma^*$. Given integers i, j where $1 \leq i \leq j \leq m$, we denote a *factor* of s as $s[i \dots j] = s_i s_{i+1} \dots s_j$.

$$s = \boxed{\mathtt{a}}\boxed{\mathtt{b}}\underbrace{\boxed{\mathtt{b}}\boxed{\mathtt{c}}\boxed{\mathtt{a}}}_{s[3,5]}\boxed{\mathtt{b}}\boxed{\mathtt{c}}\boxed{\mathtt{d}}\boxed{\mathtt{a}}\boxed{\mathtt{b}}\boxed{\mathtt{c}}$$

Preliminaries

Prefix

A factor x of s is a prefix of s if $s = xu$ with $u \in \Sigma^*$. The ith *prefix* of s, denoted $pref_s(i)$, is the prefix $s[1 \ldots i]$.

$$s = \underbrace{\boxed{\texttt{a}}\boxed{\texttt{b}}\boxed{\texttt{b}}\boxed{\texttt{c}}}_{pref_s(4)}\boxed{\texttt{a}}\boxed{\texttt{b}}\boxed{\texttt{c}}\boxed{\texttt{d}}\boxed{\texttt{a}}\boxed{\texttt{b}}\boxed{\texttt{c}}$$

Suffix

A factor x of s is a suffix of s if $s = ux$ with $u \in \Sigma^*$. The ith *suffix* of s, denoted $suff_s(i)$, is the suffix $s[i \ldots m]$.

$$s = \boxed{\texttt{a}}\boxed{\texttt{b}}\boxed{\texttt{b}}\boxed{\texttt{c}}\boxed{\texttt{a}}\underbrace{\boxed{\texttt{b}}\boxed{\texttt{c}}\boxed{\texttt{d}}\boxed{\texttt{a}}\boxed{\texttt{b}}\boxed{\texttt{c}}}_{suff_s(6)}$$

Preliminaries

Longest Repeated Suffix (LRS)

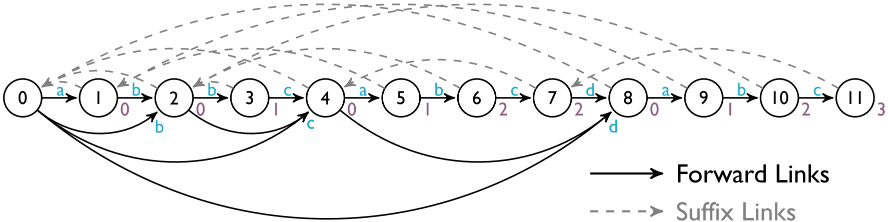
A factor x of s is the longest repeated suffix of s if x is a suffix of s and $|x|$ is maximal.

$$s = \begin{array}{|c|c|c|c|}\hline \texttt{a} & \texttt{b} & \texttt{b} & \texttt{c} \\ \hline \end{array}\underbrace{\begin{array}{|c|c|c|}\hline \texttt{a} & \texttt{b} & \texttt{c} \\ \hline \end{array}}_{lrs(s)}\begin{array}{|c|c|c|c|}\hline \texttt{d} & \texttt{a} & \texttt{b} & \texttt{c} \\ \hline \end{array}$$

Factor Oracle

Factor Oracle

Overview

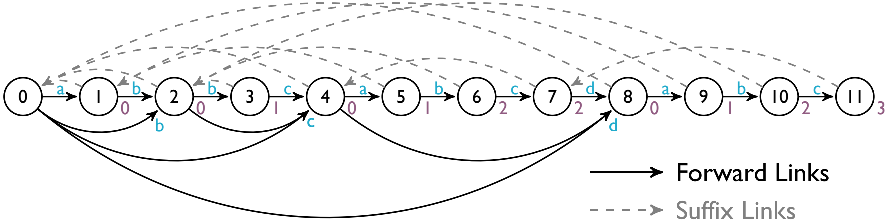


Factor Oracle

The factor oracle of a word s of length m is a *deterministic finite automaton* (Q, q_0, F, δ) where $Q = \{0, 1, \ldots, m\}$ is the set of states, $q_0 = 0$ is the starting state, $F = Q$ is the set of terminal states and δ is the transition function.

Factor Oracle

Overview



Suffix Link

The suffix link of a state *i* of the factor oracle of a word *s*, is equal to the state in which the *longest repeated suffix (lrs)* of $s[1 \dots i]$ is recognized.

Factor Oracle

Algorithm

Algorithm 1 Construction of a Factor Oracle

```
function FactorOracle($p = p_1 p_2 \dots p_m$)
    Create a new oracle $P$ with an initial state 0
    $S_P(0) \leftarrow -1$
    for $i \leftarrow 1, m$ do
        $Oracle(p = p_1 p_2 \dots p_i) \leftarrow$ AddLetter($Oracle(p = p_1 p_2 \dots p_{i-1}), p_i$)
    end for
    return $Oracle(p = p_1 p_2 \dots p_m)$
end function
```

Factor Oracle

Algorithm

Algorithm 1 Construction of a Factor Oracle

```
function FactorOracle($p = p_1 p_2 \dots p_m$)
    Create a new oracle $P$ with an initial state 0
    $S_P(0) \leftarrow -1$
    for $i \leftarrow 1, m$ do
        $Oracle(p = p_1 p_2 \dots p_i) \leftarrow$ AddLetter($Oracle(p = p_1 p_2 \dots p_{i-1}), p_i$)
    end for
    return $Oracle(p = p_1 p_2 \dots p_m)$
end function
```
